## Campus Executive Summary

Building condition is evaluated based on the functional systems and elements of a building and organized according to the UNIFORMAT II Elemental Classification. The grouping of these systems and elements and applying a current replacement value to them develops a representative building cost model. Cost Models are developed for similar building types and functions. Systems and their elements are evaluated based on their current replacement values, life cycles, installation dates and next renewal dates. Systems and their elements that are within their useful lives are further evaluated to identify current deficient conditions that may have a significant impact on a system's or element's remaining service life, and to determine if they are beyond their predicted expected life. The system's or element's current replacement value is based on RS Means Commercial Cost Data.

Following are the cost model's system details for this facility. The **Replacement Value** is the amount needed to replace the property of the same present scope. The **Repair Cost** (the sum of the cost to repair/replace the Deficiencies) represents the budgeted contractor-installed costs plus owner's soft costs for the repair, replacement or renewal for a component or system level deficiency. It excludes contributing costs for other components or systems that might also be associated with the corrective actions due to packaging of the work. **Facility Condition Index** ( **FCI**) is an industry-standard measurement of facility condition calculated as the ratio of the costs to correct a facility's deficiencies (Condition Needs) to the facility's Current Replacement Value. It ranges from 0% (new) to 100% (very poor - beyond service life). The **Remaining Service Life Index** (**RSLI**) is calculated as the sum of a renewable system's **Remaining Service Life** (**RSL**) divided by the sum of a system's Replacement Value (both values exclude soft-cost to simplify calculation updates) expressed as a percentage ranging from 100% (new) to 0% (expired). The relationship between the key metrics FCI and RSLI is an important indicator, at either the facility, building, system, or component levels, of the condition trend and the imminent need for capital renewal. These indices exist in an inverse relationship wherein the FCI increases when systems reach their expected life-cycle age, whereas the RSLI decreases annually indicating the relative time remaining before reaching the life-cycle expiration age. For example, a facility or a system with a high RSLI and a low FCI indicates it is in the early portion of its useful life. However, a low RSLI indicates that expiration dates are approaching at which point the FCI would increase. The term **FCA Score** is the inverse of Total FCI and calculated as 100-Total FCI (without the %) where 100 is best and 0 is worst condition.

**Description:**

GENERAL:
Wayne Avenue Elementary is located at 910 W Harnett Street in Dunn, North Carolina. The 1 story, 27,822 square foot building was originally constructed in 1957 There have been 2 additions. A Media Center and Multi-Purpose room was added between 1998 and2005. In addition to the main building, the campus contains 10 mobile classes.

This report contains condition and adequacy data collected during the 2016 Facility Condition Assessment (FCA). Detailed condition and deficiency statements are contained in this report for the site and building elements.

A. SUBSTRUCTURE
The building rests on slab-on grade and is assumed to have standard cast-in-place concrete foundations. The building does not have a basement.

B. SUPERSTRUCTURE
Roof construction is steel. The exterior envelope is composed of walls of brick veneer over CMU. Exterior windows are aluminum frame with fixed panes. Exterior doors are hollow metal steel mostly with glazing. Roofing is typically low slope single ply membrane. Most building entrances appear to comply with ADA requirements.

C. INTERIORS
Interior partitions are typically CMU. Interior doors are generally solid core wood with wood frames and mostly with glazing. Interior fittings include the following items: white boards, toilet accessories, storage shelving, handrails, and fabricated toilet partitions. The interior wall finishes are typically painted CMU. Floor finishes in common areas are typically vinyl composition tile. Floor finishes in assignable spaces is typically carpet. Ceiling finishes in common areas are typically1X1 glue on acoustical tile, painted hard lid and suspended acoustical tile.

CONVEYING:
The building does not include conveying equipment.

D. SERVICES
PLUMBING: Plumbing fixtures are typically on-low-flow water fixtures with manual control valves. Domestic water distribution is combination of copper and galvanized steel with electric hot water heating. Sanitary waste system is cast iron. Rain water drainage system is internal with roof drains. Other plumbing systems is supplied by natural gas.

HVAC:
Heating and Cooling is supplied by AC/Heat combo units. Ceiling mounted exhaust fans are installed in bathrooms and other required areas.

FIRE PROTECTION:
The building does not have a fire sprinkler system. The building does have additional fire suppression systems, which include dry chemical system for the kitchen exhaust hood. Fire extinguishers and cabinets are distributed near fire exits and corridors.

ELECTRICAL:
The main electrical service is fed from a pad mounted transformer to the main switchboard/distribution panel located in the building. Lighting is lay-in, recessed and surface type, fluorescent light fixtures. Branch circuit wiring is typically copper serving electrical switches and receptacles. Emergency and life safety egress lighting systems are installed and exit signs are present at exit doors and near stairways and are typically illuminated.

COMMUNICATIONS AND SECURITY:
The fire alarm system consists of audible/visual strobe annunciators in common spaces, balconies and interior corridors. The system is activated by manual pull stations and smoke detectors and the system is centrally monitored. The telephone and data systems are segregated and include dedicated equipment closets. This building does have a local area network (LAN). The building includes an internal security system that is actuated by the following items: contacts, infrared, optical or a combination of all devices. The security system has CCTV cameras and is centrally monitored; this building has a public address and paging system separate from the telephone system.

OTHER ELECTRICAL SYSTEMS:
This building does not have a separately derived emergency power system.

E. EQUIPMENT & FURNISHINGS:
This building includes the following items and equipment: fixed food service, library equipment, athletic equipment, theater and stage, audio-visual, laboratory, casework, window treatment, floor grilles and mats, and multiple seating furnishings.

G. SITE:
Campus site features include paved driveways and parking lots, pedestrian pavement, flag pole, landscaping, play areas, and fencing. Site mechanical and electrical features include water, sewer, natural gas, and site lighting.

4). West Elevation - Dec 08, 2016

## Condition Detail

This section of the report contains results of the Facility Condition Assessment. The building is separated into system components based on UNIFORMAT II. The columns in the System Listing table represent the following:

1. System Code:  A code that identifies the system.
2. System Description:  A brief description of a system present in the building.
3. Unit Price $:  The unit price of the system.
4. UoM:  The unit of measure of the system.
5. Qty:  The quantity for the system
6. Life:  Building Owners and Managers Association (BOMA) recommended system design life.
7. Year Installed:  The date of system installation.
8. Calc Next Renewal Year:  The date of system expiration based on the life, NR stands for non renewable.
9. Next Renewal Year:  The suggested system expiration date by the assessor based on visual inspection.
10. RSLI:  The Remaining Service Life Index of the system.
11. FCI:  The Facility Condition Index of the system.
12. RSL:  Remaining Service Life in years.
13. eCR:  eCOMET Condition Rating (not used in this assessment).
14. Deficiency $:  The financial investment to repair/replace system to address deficiency.
15. Replacement Value $:  The replacement cost of the system.

## System Listing

The System Listing table below lists each of the systems organized by their UNIFORMAT II classification. The assessment team was tasked with recording the most recent replacement year of each system, determining the remaining service life based on the theoretical life, and evaluating the condition to confirm the forecast next replacement year. The system listing is the basis for all data contained in the Building Assessment Report.

## Renewal Schedule

eCOMET forecasts future Capital Renewal projects for expiring systems based on the Calculated Next Renewal year found in the system listing. There is a 3% yearly inflation factor applied to the system costs expiring in the future. The table below reflects Capital Renewal projects over the next 10 years. Note: Blank cells (or $0) indicate no systems are scheduled for renewal in that year.

*Inflation Rate: 3%*

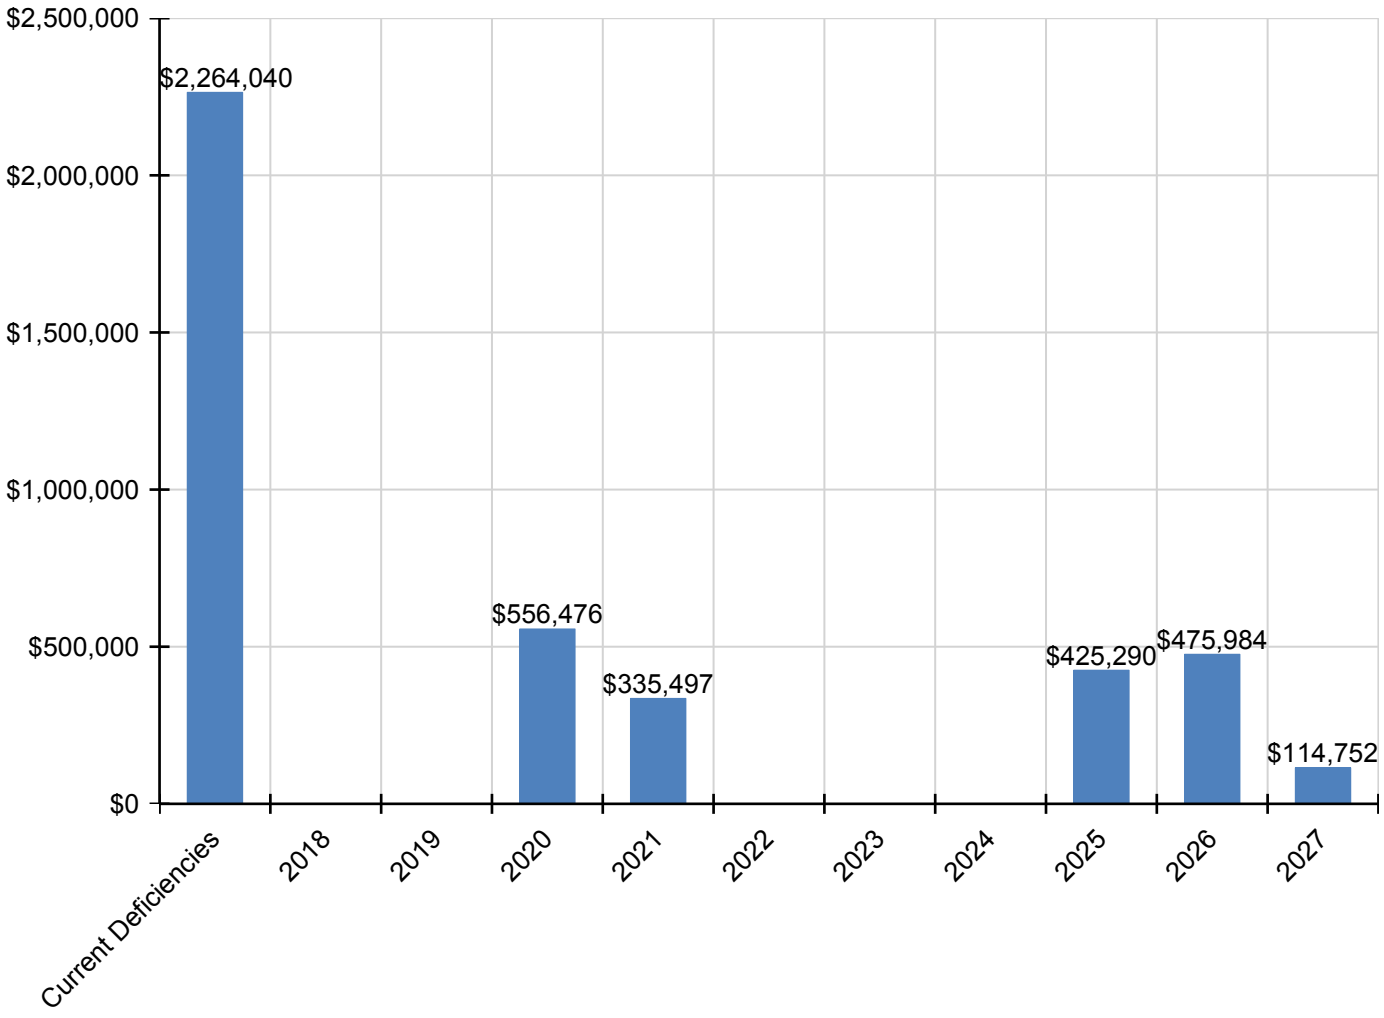
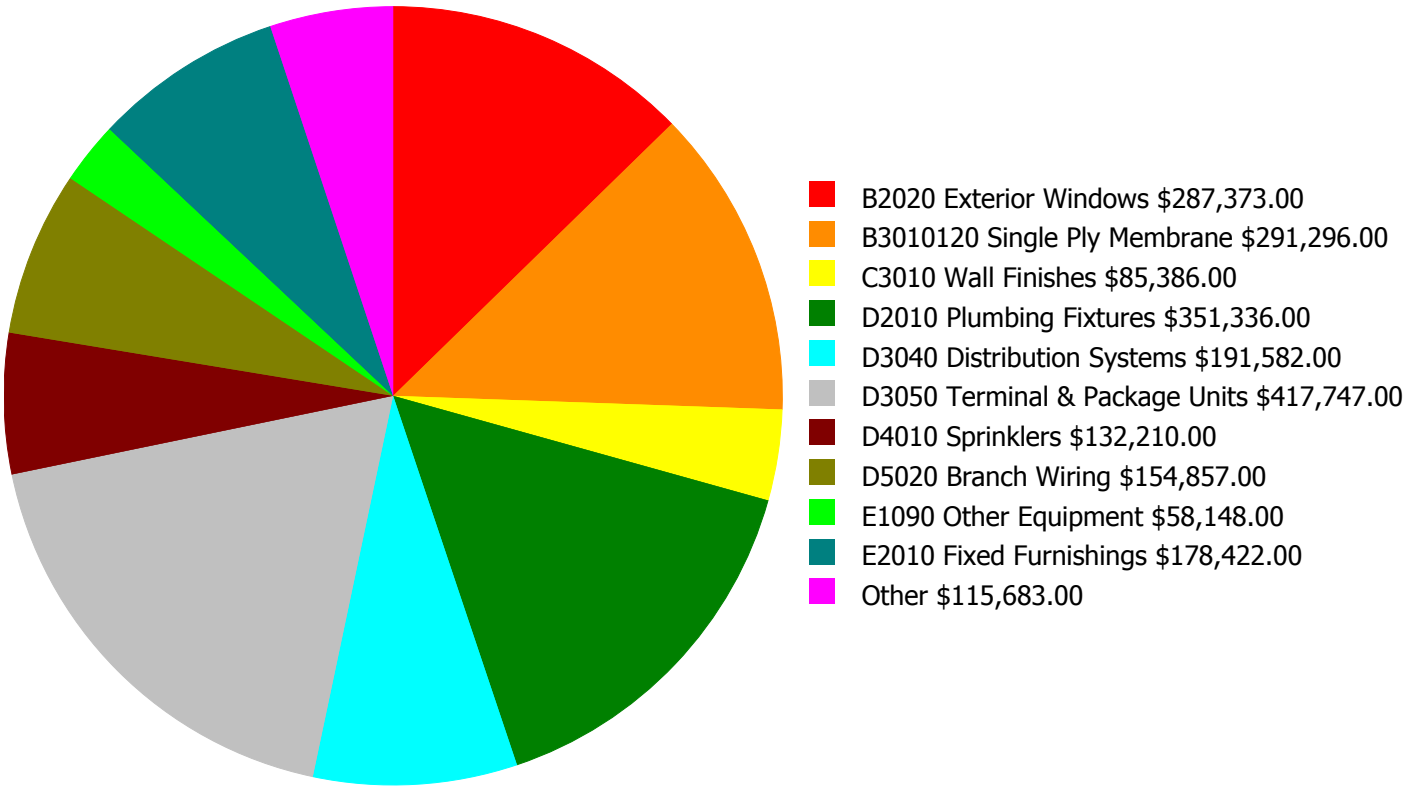
## Forecasted Capital Renewal Requirement

The following chart shows the current building deficiencies and forecasting capital renewal or sustainment requirements over the next ten years.



## Deficiency Summary by System

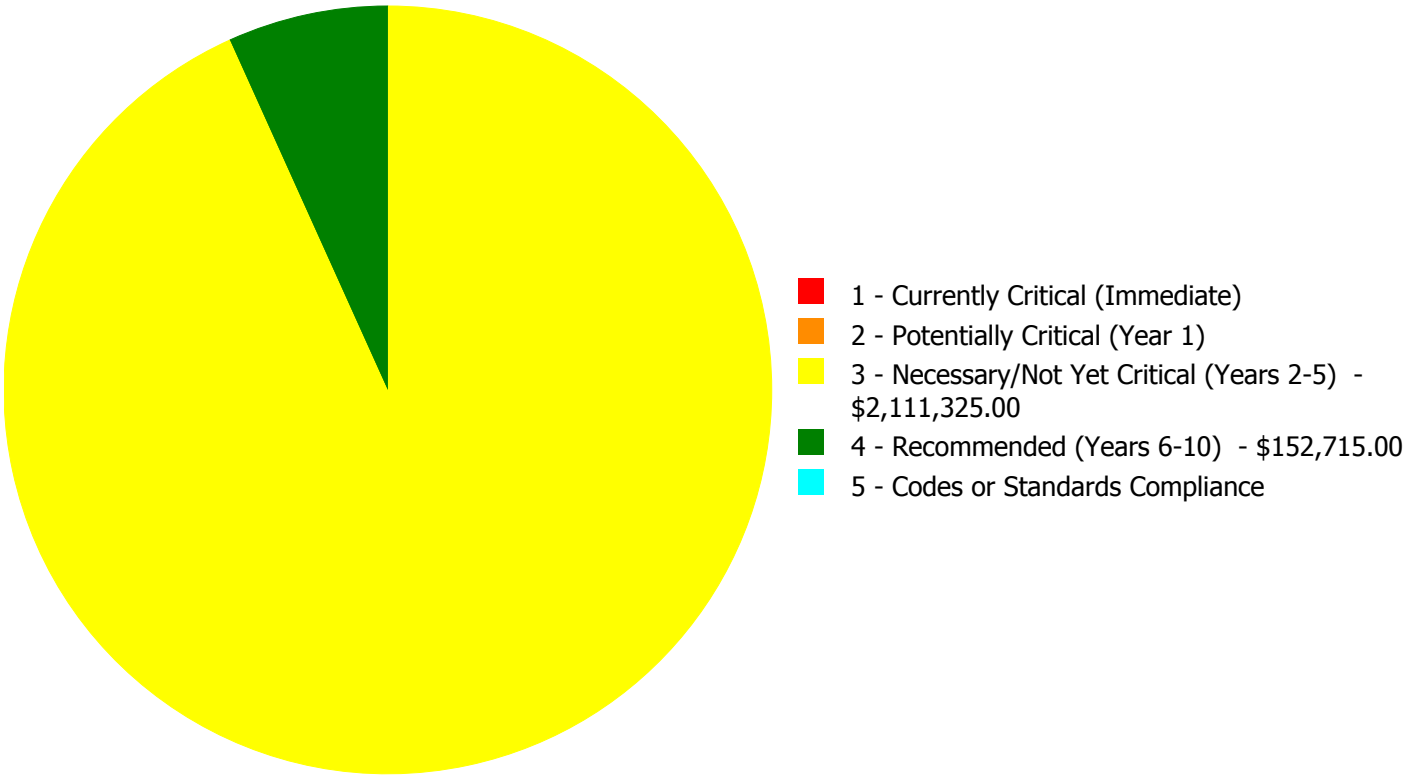
Current deficiencies included assemblies that have reached or exceeded their design life or components of the assemblies that are in need of repair. Assemblies that have reached their design life are identified as current deficiencies and assigned the distress 'Beyond Useful Life'. The following chart lists all current deficiencies associated with this facility.



**Budget Estimate Total: $2,264,040.00**

## Deficiency Summary by Priority

The following chart shows the total repair costs broken down by priority. Assessors assigned deficiencies within eCOMET to one of the following priority categories:



**Budget Estimate Total: $2,264,040.00**

## Deficiency By Priority Investment Table

The table below shows the current investment cost grouped by deficiency priority and building system.

## Deficiency Details by Priority

The deficiency detail notes listed below provide additional information on identified deficiencies found within the facility.

### Priority 3 - Necessary/Not Yet Critical (Years 2-5):

**System: B2020 - Exterior Windows**

**Location:** Exterior
**Distress:** Beyond Service Life
**Category:** Deferred Maintenance
**Priority:** 3 - Necessary/Not Yet Critical (Years 2-5)
**Correction:** Renew System
**Qty:** 27,822.00
**Unit of Measure:** S.F.
**Estimate:** $287,373.00
**Assessor Name:** Terence Davis
**Date Created:** 12/08/2016

**Notes:** The aluminum frame single pane windows are aged, rusted, not energy efficient, and should be replaced.

**System: B3010120 - Single Ply Membrane**

**Location:** Roof
**Distress:** Failing
**Category:** Deferred Maintenance
**Priority:** 3 - Necessary/Not Yet Critical (Years 2-5)
**Correction:** Renew System
**Qty:** 27,822.00
**Unit of Measure:** S.F.
**Estimate:** $291,296.00
**Assessor Name:** Terence Davis
**Date Created:** 12/08/2016

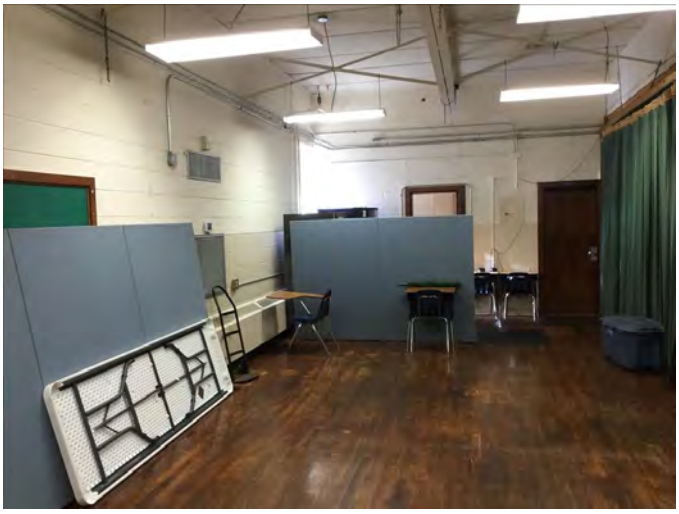
**Notes:** The single ply adhered roof coverings are aging, showing signs of failure and should be replaced.

**System: B3020 - Roof Openings**

**Location:** Roof
**Distress:** Beyond Service Life
**Category:** Deferred Maintenance
**Priority:** 3 - Necessary/Not Yet Critical (Years 2-5)
**Correction:** Renew System
**Qty:** 27,822.00
**Unit of Measure:** S.F.
**Estimate:** $8,875.00
**Assessor Name:** Terence Davis
**Date Created:** 12/08/2016

**Notes:** The roof openings should be inspected and repaired when the roof is replaced.

**System: C3010 - Wall Finishes**



**Location:** Throughout the building
**Distress:** Beyond Service Life
**Category:** Deferred Maintenance
**Priority:** 3 - Necessary/Not Yet Critical (Years 2-5)
**Correction:** Renew System
**Qty:** 27,822.00
**Unit of Measure:** S.F.
**Estimate:** $85,386.00
**Assessor Name:** Terence Davis
**Date Created:** 12/08/2016

**Notes:** The wall finishes are aged, scuffed, fading, stained, and should be re-painted.

**System: D2010 - Plumbing Fixtures**

**Location:** Restroom
**Distress:** Beyond Service Life
**Category:** Deferred Maintenance
**Priority:** 3 - Necessary/Not Yet Critical (Years 2-5)
**Correction:** Renew System
**Qty:** 27,822.00
**Unit of Measure:** S.F.
**Estimate:** $351,336.00
**Assessor Name:** Terence Davis
**Date Created:** 12/08/2016

**Notes:** Plumbing fixtures are in operational conditions. However, they are aged, not ADA compliant and should be replaced with a low-flow water fixtures.

**System: D2020 - Domestic Water Distribution**

**Location:** Throughout the building
**Distress:** Beyond Service Life
**Category:** Deferred Maintenance
**Priority:** 3 - Necessary/Not Yet Critical (Years 2-5)
**Correction:** Renew System
**Qty:** 27,822.00
**Unit of Measure:** S.F.
**Estimate:** $29,992.00
**Assessor Name:** Terence Davis
**Date Created:** 12/08/2016

**Notes:** There are no reported issues or observed deficiencies with the domestic water piping. Due to the age of the pipe there can be internal pitting corrosion that may be a costly problem that leads to the formation of pinhole leaks and possible water contamination.

**System: D2030 - Sanitary Waste**

**Location:** Throughout the building
**Distress:** Beyond Service Life
**Category:** Deferred Maintenance
**Priority:** 3 - Necessary/Not Yet Critical (Years 2-5)
**Correction:** Renew System
**Qty:** 27,822.00
**Unit of Measure:** S.F.
**Estimate:** $47,130.00
**Assessor Name:** Terence Davis
**Date Created:** 12/08/2016

**Notes:** The sanitary waste system is aged and should be replaced.

**System: D3040 - Distribution Systems**

**Location:** Throughout the building
**Distress:** Beyond Service Life
**Category:** Deferred Maintenance
**Priority:** 3 - Necessary/Not Yet Critical (Years 2-5)
**Correction:** Renew System
**Qty:** 27,822.00
**Unit of Measure:** S.F.
**Estimate:** $191,582.00
**Assessor Name:** Terence Davis
**Date Created:** 12/08/2016

**Notes:** The distribution system is aged, in marginal condition, and should be replaced.

**System: D3050 - Terminal & Package Units**

**Location:** Exterior
**Distress:** Beyond Service Life
**Category:** Deferred Maintenance
**Priority:** 3 - Necessary/Not Yet Critical (Years 2-5)
**Correction:** Renew System
**Qty:** 27,822.00
**Unit of Measure:** S.F.
**Estimate:** $417,747.00
**Assessor Name:** Terence Davis
**Date Created:** 12/08/2016

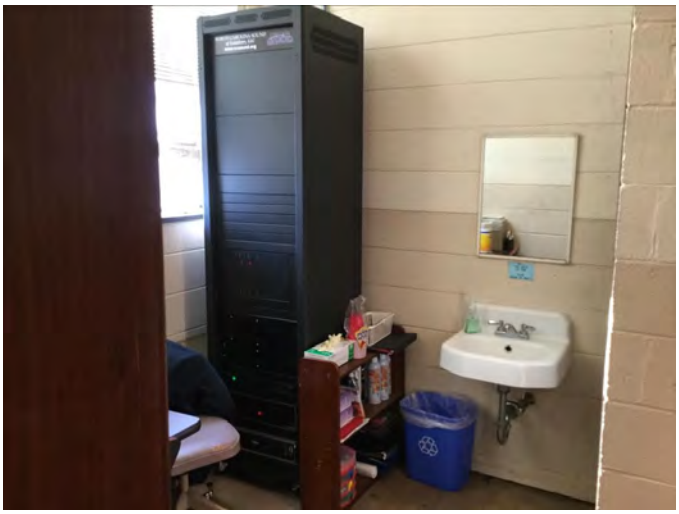
**Notes:** The wall mounted Carrier DX condensing units are aged and should be scheduled for replacement.

**System: D5020 - Branch Wiring**

**Location:** Throughout the building
**Distress:** Beyond Service Life
**Category:** Deferred Maintenance
**Priority:** 3 - Necessary/Not Yet Critical (Years 2-5)
**Correction:** Renew System
**Qty:** 27,822.00
**Unit of Measure:** S.F.
**Estimate:** $154,857.00
**Assessor Name:** Terence Davis
**Date Created:** 12/08/2016

**Notes:** The original electrical service is operating, maxed to capacity and should be replaced.

**System: E1020 - Institutional Equipment**



**Location:** kitchen
**Distress:** Beyond Service Life
**Category:** Deferred Maintenance
**Priority:** 3 - Necessary/Not Yet Critical (Years 2-5)
**Correction:** Renew System
**Qty:** 27,822.00
**Unit of Measure:** S.F.
**Estimate:** $9,181.00
**Assessor Name:** Terence Davis
**Date Created:** 12/08/2016

**Notes:** The Library Equipment, Theater Stage Equipment, Audio-visual Equipment, Other Institutional Equipment is operating but is aged, becoming logistically un-supportable, and should be replaced.

**System: E1090 - Other Equipment**

**Location:** Kitchen
**Distress:** Beyond Service Life
**Category:** Deferred Maintenance
**Priority:** 3 - Necessary/Not Yet Critical (Years 2-5)
**Correction:** Renew System
**Qty:** 27,822.00
**Unit of Measure:** S.F.
**Estimate:** $58,148.00
**Assessor Name:** Terence Davis
**Date Created:** 12/08/2016

**Notes:** The Food Service Equipment is operating but is aged should be inspected and replaced or repaired as needed.

**System: E2010 - Fixed Furnishings**

**Location:** Throughout the building
**Distress:** Beyond Service Life
**Category:** Deferred Maintenance
**Priority:** 3 - Necessary/Not Yet Critical (Years 2-5)
**Correction:** Renew System
**Qty:** 27,822.00
**Unit of Measure:** S.F.
**Estimate:** $178,422.00
**Assessor Name:** Terence Davis
**Date Created:** 12/08/2016

**Notes:** The fixed furnishings are aged, in marginal condition, and should be replaced.

## Priority 4 - Recommended (Years 6-10):

**System: D4010 - Sprinklers**

This deficiency has no image.

**Location:** Throughout the building
**Distress:** Missing
**Category:** Building Code Compliance
**Priority:** 4 - Recommended (Years 6-10)
**Correction:** Renew System
**Qty:** 27,822.00
**Unit of Measure:** S.F.
**Estimate:** $132,210.00
**Assessor Name:** Terence Davis
**Date Created:** 12/08/2016

**Notes:** There is no sprinkler system in the building.

**System: D4020 - Standpipes**

This deficiency has no image.

**Location:** Throughout the building
**Distress:** Missing
**Category:** Building Code Compliance
**Priority:** 4 - Recommended (Years 6-10)

## Executive Summary

Building condition is evaluated based on the functional systems and elements of a building and organized according to the UNIFORMAT II Elemental Classification. The grouping of these systems and elements and applying a current replacement value to them develops a representative building cost model. Cost Models are developed for similar building types and functions. Systems and their elements are evaluated based on their current replacement values, life cycles, installation dates and next renewal dates. Systems and their elements that are within their useful lives are further evaluated to identify current deficient conditions that may have a significant impact on a system's or element's remaining service life, and to determine if they are beyond their predicted expected life. The system's or element's current replacement value is based on RS Means Commercial Cost Data.

Following are the cost model's system details for this facility. The **Replacement Value** is the amount needed to replace the property of the same present scope. The **Repair Cost** (the sum of the cost to repair/replace the Deficiencies) represents the budgeted contractor-installed costs plus owner's soft costs for the repair, replacement or renewal for a component or system level deficiency. It excludes contributing costs for other components or systems that might also be associated with the corrective actions due to packaging of the work. **Facility Condition Index** ( **FCI**) is an industry-standard measurement of facility condition calculated as the ratio of the costs to correct a facility's deficiencies (Condition Needs) to the facility's Current Replacement Value. It ranges from 0% (new) to 100% (very poor - beyond service life). The **Remaining Service Life Index** (**RSLI**) is calculated as the sum of a renewable system's **Remaining Service Life** (**RSL**) divided by the sum of a system's Replacement Value (both values exclude soft-cost to simplify calculation updates) expressed as a percentage ranging from 100% (new) to 0% (expired). The relationship between the key metrics FCI and RSLI is an important indicator, at either the facility, building, system, or component levels, of the condition trend and the imminent need for capital renewal. These indices exist in an inverse relationship wherein the FCI increases when systems reach their expected life-cycle age, whereas the RSLI decreases annually indicating the relative time remaining before reaching the life-cycle expiration age. For example, a facility or a system with a high RSLI and a low FCI indicates it is in the early portion of its useful life. However, a low RSLI indicates that expiration dates are approaching at which point the FCI would increase. The term **FCA Score** is the inverse of Total FCI and calculated as 100-Total FCI (without the %) where 100 is best and 0 is worst condition.

## Photo Album

The photo album consists of the various cardinal directions of the building..

1). West Elevation - Dec 08, 2016

2). West Elevation - Dec 08, 2016

3). South Elevation - Dec 08, 2016

4). East Elevation - Dec 08, 2016

5). North Elevation - Dec 08, 2016

## Condition Detail

This section of the report contains results of the Facility Condition Assessment. The building is separated into system components based on UNIFORMAT II. The columns in the System Listing table represent the following:

1. System Code:  A code that identifies the system.
2. System Description:  A brief description of a system present in the building.
3. Unit Price $:  The unit price of the system.
4. UoM:  The unit of measure of the system.
5. Qty:  The quantity for the system
6. Life:  Building Owners and Managers Association (BOMA) recommended system design life.
7. Year Installed:  The date of system installation.
8. Calc Next Renewal Year:  The date of system expiration based on the life, NR stands for non renewable.
9. Next Renewal Year:  The suggested system expiration date by the assessor based on visual inspection.
10. RSLI:  The Remaining Service Life Index of the system.
11. FCI:  The Facility Condition Index of the system.
12. RSL:  Remaining Service Life in years.
13. eCR:  eCOMET Condition Rating (not used in this assessment).
14. Deficiency $:  The financial investment to repair/replace system to address deficiency.
15. Replacement Value $:  The replacement cost of the system.

## System Listing

The System Listing table below lists each of the systems organized by their UNIFORMAT II classification. The assessment team was tasked with recording the most recent replacement year of each system, determining the remaining service life based on the theoretical life, and evaluating the condition to confirm the forecast next replacement year. The system listing is the basis for all data contained in the Building Assessment Report.

## Renewal Schedule

eCOMET forecasts future Capital Renewal projects for expiring systems based on the Calculated Next Renewal year found in the system listing. There is a 3% yearly inflation factor applied to the system costs expiring in the future. The table below reflects Capital Renewal projects over the next 10 years. Note: Blank cells (or $0) indicate no systems are scheduled for renewal in that year.

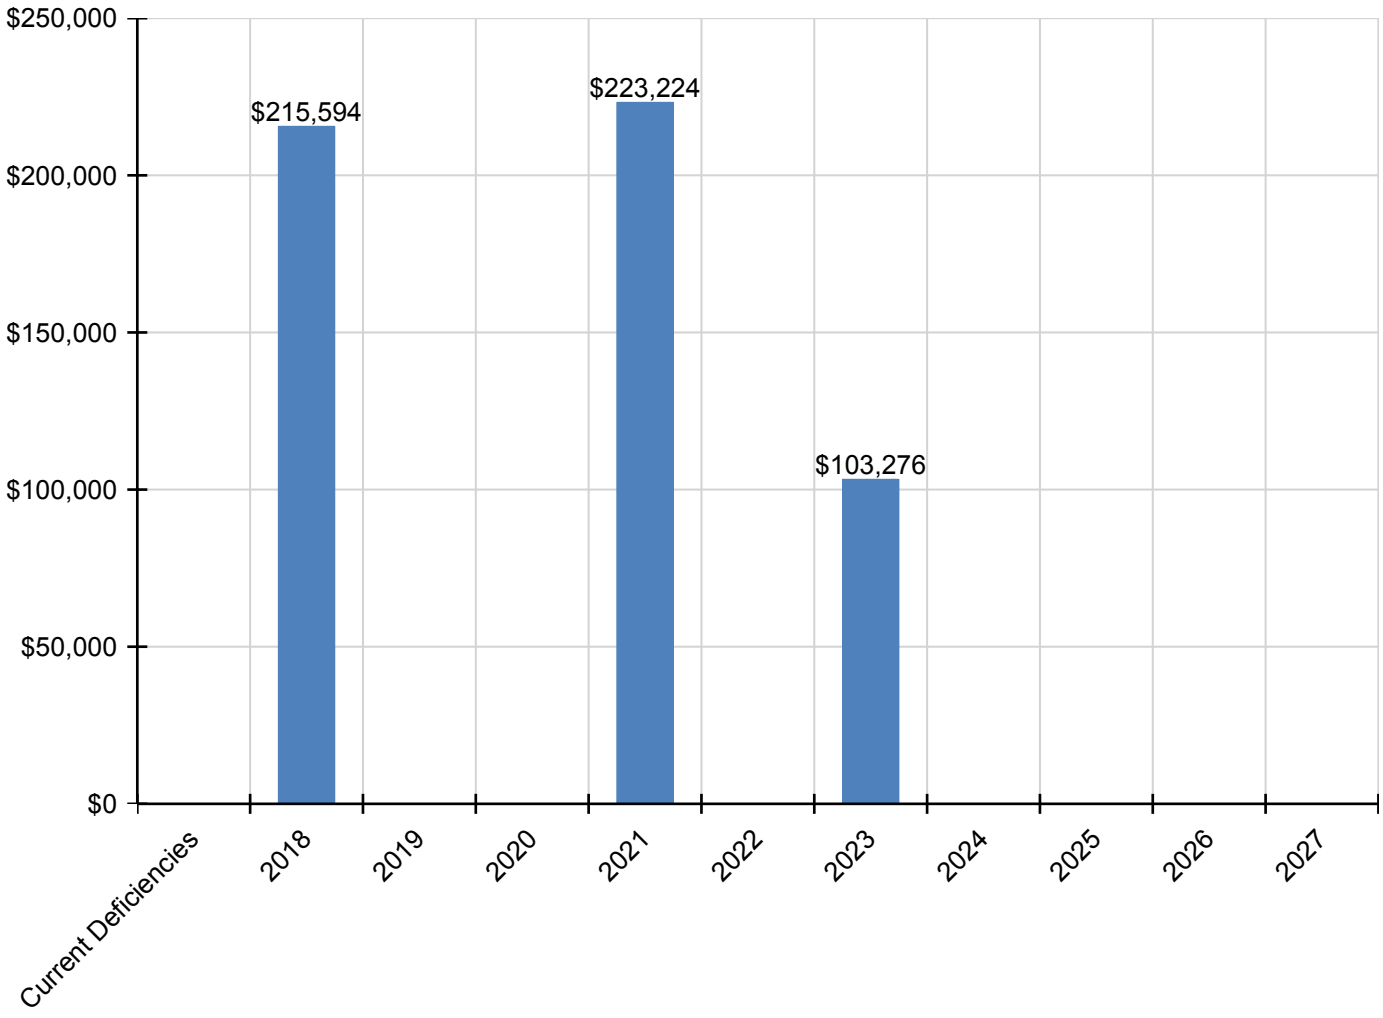
## Forecasted Capital Renewal Requirement

The following chart shows the current building deficiencies and forecasting capital renewal or sustainment requirements over the next ten years.



## Deficiency Summary by System

Current deficiencies included assemblies that have reached or exceeded their design life or components of the assemblies that are in need of repair. Assemblies that have reached their design life are identified as current deficiencies and assigned the distress 'Beyond Useful Life'. The following chart lists all current deficiencies associated with this facility.

## Executive Summary

Building condition is evaluated based on the functional systems and elements of a building and organized according to the UNIFORMAT II Elemental Classification. The grouping of these systems and elements and applying a current replacement value to them develops a representative building cost model. Cost Models are developed for similar building types and functions. Systems and their elements are evaluated based on their current replacement values, life cycles, installation dates and next renewal dates. Systems and their elements that are within their useful lives are further evaluated to identify current deficient conditions that may have a significant impact on a system's or element's remaining service life, and to determine if they are beyond their predicted expected life. The system's or element's current replacement value is based on RS Means Commercial Cost Data.

Following are the cost model's system details for this facility. The **Replacement Value** is the amount needed to replace the property of the same present scope. The **Repair Cost** (the sum of the cost to repair/replace the Deficiencies) represents the budgeted contractor-installed costs plus owner's soft costs for the repair, replacement or renewal for a component or system level deficiency. It excludes contributing costs for other components or systems that might also be associated with the corrective actions due to packaging of the work. **Facility Condition Index** ( **FCI**) is an industry-standard measurement of facility condition calculated as the ratio of the costs to correct a facility's deficiencies (Condition Needs) to the facility's Current Replacement Value. It ranges from 0% (new) to 100% (very poor - beyond service life). The **Remaining Service Life Index** (**RSLI**) is calculated as the sum of a renewable system's **Remaining Service Life** (**RSL**) divided by the sum of a system's Replacement Value (both values exclude soft-cost to simplify calculation updates) expressed as a percentage ranging from 100% (new) to 0% (expired). The relationship between the key metrics FCI and RSLI is an important indicator, at either the facility, building, system, or component levels, of the condition trend and the imminent need for capital renewal. These indices exist in an inverse relationship wherein the FCI increases when systems reach their expected life-cycle age, whereas the RSLI decreases annually indicating the relative time remaining before reaching the life-cycle expiration age. For example, a facility or a system with a high RSLI and a low FCI indicates it is in the early portion of its useful life. However, a low RSLI indicates that expiration dates are approaching at which point the FCI would increase. The term **FCA Score** is the inverse of Total FCI and calculated as 100-Total FCI (without the %) where 100 is best and 0 is worst condition.

## Photo Album

The photo album consists of the various cardinal directions of the building..

1). South Elevation - Dec 08, 2016

2). West Elevation - Dec 08, 2016

3). Nort Elevation - Dec 08, 2016

4). East Elevation - Dec 08, 2016

## Condition Detail

This section of the report contains results of the Facility Condition Assessment. The building is separated into system components based on UNIFORMAT II. The columns in the System Listing table represent the following:

1. System Code:  A code that identifies the system.
2. System Description:  A brief description of a system present in the building.
3. Unit Price $:  The unit price of the system.
4. UoM:  The unit of measure of the system.
5. Qty:  The quantity for the system
6. Life:  Building Owners and Managers Association (BOMA) recommended system design life.
7. Year Installed:  The date of system installation.
8. Calc Next Renewal Year:  The date of system expiration based on the life, NR stands for non renewable.
9. Next Renewal Year:  The suggested system expiration date by the assessor based on visual inspection.
10. RSLI:  The Remaining Service Life Index of the system.
11. FCI:  The Facility Condition Index of the system.
12. RSL:  Remaining Service Life in years.
13. eCR:  eCOMET Condition Rating (not used in this assessment).
14. Deficiency $:  The financial investment to repair/replace system to address deficiency.
15. Replacement Value $:  The replacement cost of the system.

## System Listing

The System Listing table below lists each of the systems organized by their UNIFORMAT II classification. The assessment team was tasked with recording the most recent replacement year of each system, determining the remaining service life based on the theoretical life, and evaluating the condition to confirm the forecast next replacement year. The system listing is the basis for all data contained in the Building Assessment Report.

## Renewal Schedule

eCOMET forecasts future Capital Renewal projects for expiring systems based on the Calculated Next Renewal year found in the system listing. There is a 3% yearly inflation factor applied to the system costs expiring in the future. The table below reflects Capital Renewal projects over the next 10 years. Note: Blank cells (or $0) indicate no systems are scheduled for renewal in that year.

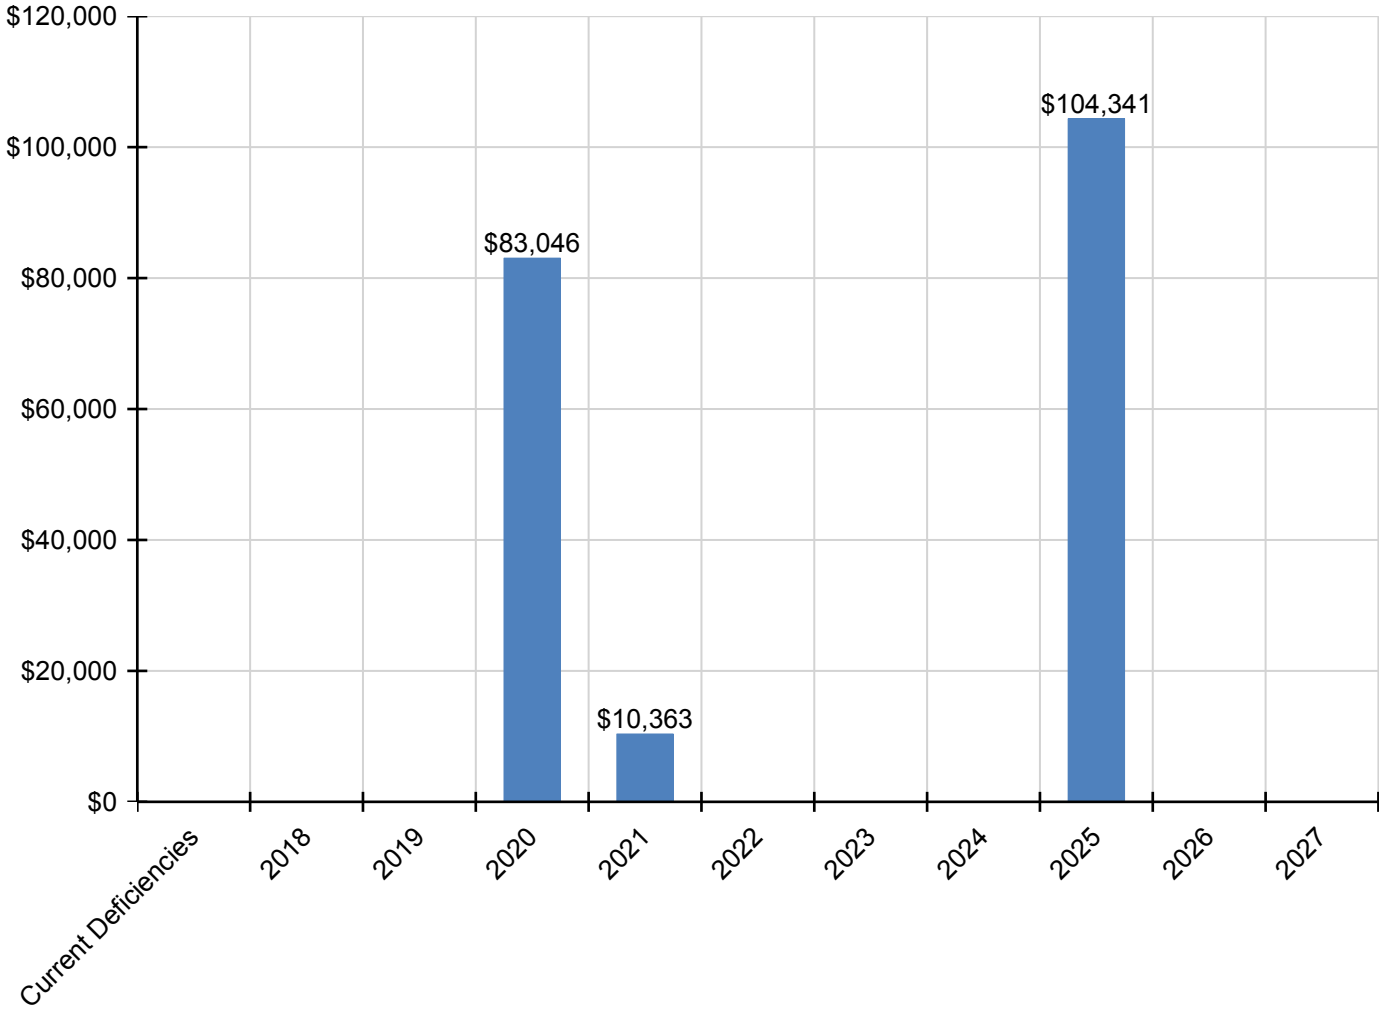
## Forecasted Capital Renewal Requirement

The following chart shows the current building deficiencies and forecasting capital renewal or sustainment requirements over the next ten years.



## Deficiency Summary by System

Current deficiencies included assemblies that have reached or exceeded their design life or components of the assemblies that are in need of repair. Assemblies that have reached their design life are identified as current deficiencies and assigned the distress 'Beyond Useful Life'. The following chart lists all current deficiencies associated with this facility.

## Executive Summary

Building condition is evaluated based on the functional systems and elements of a building and organized according to the UNIFORMAT II Elemental Classification. The grouping of these systems and elements and applying a current replacement value to them develops a representative building cost model. Cost Models are developed for similar building types and functions. Systems and their elements are evaluated based on their current replacement values, life cycles, installation dates and next renewal dates. Systems and their elements that are within their useful lives are further evaluated to identify current deficient conditions that may have a significant impact on a system's or element's remaining service life, and to determine if they are beyond their predicted expected life. The system's or element's current replacement value is based on RS Means Commercial Cost Data.

Following are the cost model's system details for this facility. The **Replacement Value** is the amount needed to replace the property of the same present scope. The **Repair Cost** (the sum of the cost to repair/replace the Deficiencies) represents the budgeted contractor-installed costs plus owner's soft costs for the repair, replacement or renewal for a component or system level deficiency. It excludes contributing costs for other components or systems that might also be associated with the corrective actions due to packaging of the work. **Facility Condition Index** ( **FCI**) is an industry-standard measurement of facility condition calculated as the ratio of the costs to correct a facility's deficiencies (Condition Needs) to the facility's Current Replacement Value. It ranges from 0% (new) to 100% (very poor - beyond service life). The **Remaining Service Life Index** (**RSLI**) is calculated as the sum of a renewable system's **Remaining Service Life** (**RSL**) divided by the sum of a system's Replacement Value (both values exclude soft-cost to simplify calculation updates) expressed as a percentage ranging from 100% (new) to 0% (expired). The relationship between the key metrics FCI and RSLI is an important indicator, at either the facility, building, system, or component levels, of the condition trend and the imminent need for capital renewal. These indices exist in an inverse relationship wherein the FCI increases when systems reach their expected life-cycle age, whereas the RSLI decreases annually indicating the relative time remaining before reaching the life-cycle expiration age. For example, a facility or a system with a high RSLI and a low FCI indicates it is in the early portion of its useful life. However, a low RSLI indicates that expiration dates are approaching at which point the FCI would increase. The term **FCA Score** is the inverse of Total FCI and calculated as 100-Total FCI (without the %) where 100 is best and 0 is worst condition.

## Condition Detail

This section of the report contains results of the Facility Condition Assessment. The building is separated into system components based on UNIFORMAT II. The columns in the System Listing table represent the following:

1. System Code:  A code that identifies the system.
2. System Description:  A brief description of a system present in the building.
3. Unit Price $:  The unit price of the system.
4. UoM:  The unit of measure of the system.
5. Qty:  The quantity for the system
6. Life:  Building Owners and Managers Association (BOMA) recommended system design life.
7. Year Installed:  The date of system installation.
8. Calc Next Renewal Year:  The date of system expiration based on the life, NR stands for non renewable.
9. Next Renewal Year:  The suggested system expiration date by the assessor based on visual inspection.
10. RSLI:  The Remaining Service Life Index of the system.
11. FCI:  The Facility Condition Index of the system.
12. RSL:  Remaining Service Life in years.
13. eCR:  eCOMET Condition Rating (not used in this assessment).
14. Deficiency $:  The financial investment to repair/replace system to address deficiency.
15. Replacement Value $:  The replacement cost of the system.

## System Listing

The System Listing table below lists each of the systems organized by their UNIFORMAT II classification. The assessment team was tasked with recording the most recent replacement year of each system, determining the remaining service life based on the theoretical life, and evaluating the condition to confirm the forecast next replacement year. The system listing is the basis for all data contained in the Building Assessment Report.

## Renewal Schedule

eCOMET forecasts future Capital Renewal projects for expiring systems based on the Calculated Next Renewal year found in the system listing. There is a 3% yearly inflation factor applied to the system costs expiring in the future. The table below reflects Capital Renewal projects over the next 10 years. Note: Blank cells (or $0) indicate no systems are scheduled for renewal in that year.
